

Joe Burrascano, Jr. MD

CLINICAL UPDATE ON TICK-BORNE DISEASES

D

r. Burrascano is an internationally recognized specialist in the diagnosis and treatment of Lyme and associated complex infectious diseases, and the chronic illnesses that accompany them. With over twenty five years of experience and research in this field, he has appeared in and on virtually every form of media both here and abroad. He has also advised the CDC and NIH, testified before the U.S. Senate, an armed services joint subcommittee, and at various governor's councils.

He is a founding member of the International Lyme and Associated Diseases Society, and is currently an active Board Member of the affiliated International Lyme and Associated Diseases Educational Foundation. No longer in clinical practice, Dr. Burrascano works full time in the biotech arena to further medical research in tick-borne illnesses.

Notable among many of his ongoing projects is his active involvement in the recent development of in vitro culturing methods of symbiotic *Borrelia*, including the *Borrelia* responsible for Lyme Disease.

Dr. Burrascano is still recruiting practitioners for his ongoing project, *The Lyme and Associated Diseases Registry*™ which follows each selected patient from the beginning to the end of their illness, including tracking their symptoms, tests, treatments and outcomes.

Friday, September 14, 2012
6:30 - 7:45 pm

For both healthcare professionals, and those interested in learning more about lyme disease
